About me

Hi, I introduce myself! I'm 23 years old, and I'm a Software Developer, currently focused on website development.

I'm fascinated by the world of technology and since then my goal is to grow as a professional by constantly acquiring tools in the area.

I have experience with the MERN stack (Mongo DB, Express Js, React Js, Node Js).

Besides being a systems engineering student at the Universidad Tecnológica Nacional of Rosario.

Skills

Clean code writing, Teamwork, Problem-solving, Curious, Versatile, Good written and verbal communication, Self-management of staff and the team.

HTML 5 - Advanced	CSS 3 - Advanced
JavaScript - Medium	TypeScript - Basic
React Js - Medium	Node Js - Medium
Express - Medium	MongoDB - Basic

Experience

Software Developer — Full-time

Currently I am working as a senior developer for a company in Rosario, with international clients.

During the first months I worked for an internal company project. It was a platform where I could give courses for people internal to the company and thus train them, or, to give external courses to get new talent.

Participate from the discovery stage to the application maintenance stage.

We use TypeScript, ReactJs, NodeJs, and MongoDB. As a work methodology we use scrums with a transition from the maintenance stage to Kanban.

Software Developer — Part-time

I worked as a junior developer for a company in Rosario City. During that period I was in a project that consisted of creating a web application so that company employees can see the projects in which they participate, with their respective roles, rates, and hours worked. In addition to being able to perform tasks within the app.

The UI design was done with Figma, followed by some HTML layout and CSS styling. So all the user interaction was done through JavaScript. The whole server was also built to be able to list, create, edit, and delete managers and employees.

For the database, we use MongoDB, as it is a NoSQL database we had to make the relationships through extensions and tools that improve said DD.BB. such as Mongoose Schemas and Joi validations.
